1. Introduction

The TECHNO SALES ANALYTICS DASHBOARD is an interactive Power BI project developed to analyze sales performance, profitability, customer behavior, and regional business trends using data visualization and business intelligence techniques.

2. Problem Statement

Businesses generate large amounts of sales data daily, making it difficult to manually analyze performance, profitability, customer behavior, and regional trends effectively.

3. Project Objectives

- Analyze sales performance
- Identify profitable products and categories
- Study customer behavior
- Create interactive dashboards
- Apply data storytelling techniques
- Support business decision-making

4. Dataset Description

The dataset contains sales transaction information including order details, customer information, product categories, quantity sold, sales amount, profit information, regional data, and supervisor details.

5. Tools & Technologies Used

Power BI, DAX, Power Query, Excel/CSV Dataset, and Data Modeling techniques were used for dashboard development.

6. Data Cleaning & Preparation

The dataset was cleaned using Power Query Editor. Null values were removed, data types corrected, duplicate records handled, and date tables created.

7. Star Schema & Data Modeling

A Star Schema model was implemented using Sales_Data as the fact table and Calendar, State, and Supervisor tables as dimension tables.

8. Dashboard Pages

- Introduction Page
- Executive Overview
- Product Analysis
- Regional & Supervisor Analysis
- Business Forecasting
- SDG Goal Mapping

9. Data Storytelling

Interactive charts, KPI indicators, business insights, slicers, and recommendations were used to convert raw data into meaningful business stories.

10. SDG Goal Mapping

This project aligns with SDG Goal 8: Decent Work and Economic Growth by supporting business growth, operational efficiency, and data-driven decision-making.

11. Key Insights

- Technology category generated the highest sales
- Some regions had high sales but low profitability
- Bulk quantity orders contributed significantly to business growth

12. Business Recommendations

- Focus on high-profit categories
- Improve strategies for low-performing regions
- Strengthen inventory planning and forecasting

13. Conclusion

The project successfully transformed raw sales data into meaningful business insights using Power BI dashboards, visualizations, and storytelling techniques.

Thank You
